## Lecture 1b: Implications and equivalences

Jittat Fakcharoenphol

June 28, 2022

# This lecture covers:

- ▶ More connectives: implications and equivalences

# Review (1)

- ▶ A *proposition* is a statement which is either **true** or **false**.
- ▶ We can use variables to stand for propositions, e.g.,  $P =$  “today is Tuesday”.
- ▶ We can use connectives to combine variables to get propositional forms.
  - ▶ **Conjunction:**  $P \wedge Q$  (“ $P$  and  $Q$ ”),
  - ▶ **Disjunction:**  $P \vee Q$  (“ $P$  or  $Q$ ”), and
  - ▶ **Negation:**  $\neg P$  (“not  $P$ ”)

## Review (2)

To represents values of propositional forms, we usually use truth tables.

And/Or/Not

$P$	$Q$	$P \wedge Q$	$P \vee Q$	$\neg P$
$T$	$T$	$T$	$T$	$F$
$T$	$F$	$F$	$T$	
$F$	$T$	$F$	$T$	$T$
$F$	$F$	$F$	$F$	

## Quick check 1

As we said before, the truth value of propositional forms may not depend on the values of its variables. As you can see in this exercise.

Use a truth table to find the values of (1)  $P \wedge \neg P$  and (2)  $P \vee \neg P$ .

## Quick check 1

As we said before, the truth value of propositional forms may not depend on the values of its variables. As you can see in this exercise.

Use a truth table to find the values of (1)  $P \wedge \neg P$  and (2)  $P \vee \neg P$ .

And/Or/Not

$P$	$\neg P$	$P \wedge \neg P$	$P \vee \neg P$
$T$	$F$	$F$	$T$
$F$	$T$	$F$	$T$

## Quick check 1

As we said before, the truth value of propositional forms may not depend on the values of its variables. As you can see in this exercise.

Use a truth table to find the values of (1)  $P \wedge \neg P$  and (2)  $P \vee \neg P$ .

And/Or/Not

$P$	$\neg P$	$P \wedge \neg P$	$P \vee \neg P$
$T$	$F$	$F$	$T$
$F$	$T$	$F$	$T$

Note that  $P \wedge \neg P$  is always false and  $P \vee \neg P$  is always true. A propositional form which is always true regardless of the truth values of its variables is called a *tautology*. On the other hand, a propositional form which is always false regardless of the truth values of its variables is called a *contradiction*.

# Implications<sup>1</sup>

Given  $P$  and  $Q$ , an implication

$$P \Rightarrow Q$$

stands for “if  $P$ , then  $Q$ ”. This is a very important propositional form.

It states that “when  $P$  is true,  $Q$  must be true”. Let’s try to fill in its truth table:

## Implications

$P$	$Q$	$P \Rightarrow Q$
$T$	$T$	

# Implications<sup>1</sup>

$F$	$T$	$T$
$F$	$F$	$T$

---

<sup>1</sup>Materials in this lecture are mostly from Berkeley CS70’s lecture notes.

# What?

- ▶ Yes, when  $P$  is false,  $P \Rightarrow Q$  is **always true** no matter what truth value of  $Q$  is.
- ▶ We say that in this case, the statement  $P \Rightarrow Q$  is *vacuously true*.

# What?

- ▶ Yes, when  $P$  is false,  $P \Rightarrow Q$  is **always true** no matter what truth value of  $Q$  is.
- ▶ We say that in this case, the statement  $P \Rightarrow Q$  is *vacuously true*.
- ▶ You might feel a bit uncomfortable about this, because in most natural languages, when we say that if  $P$ , then  $Q$  we sometimes mean something more than that in the logical expression " $P \Rightarrow Q$ ."

# One explanation

- ▶ But let's look closely at what it means when we say that:

if  $P$  is true,  $Q$  must be true.

- ▶ Note that this statement does not say anything about the case when  $P$  is false, i.e., it only considers the case when  $P$  is true.

# One explanation

- ▶ But let's look closely at what it means when we say that:

if  $P$  is true,  $Q$  must be true.

- ▶ Note that this statement does not say anything about the case when  $P$  is false, i.e., it only considers the case when  $P$  is true.
- ▶ Therefore, having that  $P \Rightarrow Q$  is true is OK with the case that (1)  $Q$  is false when  $P$  is false, and (2)  $Q$  is true when  $P$  is false.

# One explanation

- ▶ But let's look closely at what it means when we say that:

if  $P$  is true,  $Q$  must be true.

- ▶ Note that this statement does not say anything about the case when  $P$  is false, i.e., it only considers the case when  $P$  is true.
- ▶ Therefore, having that  $P \Rightarrow Q$  is true is OK with the case that (1)  $Q$  is false when  $P$  is false, and (2)  $Q$  is true when  $P$  is false.
- ▶ This is an example when mathematical language is “stricter” than natural language.

## Noticing if-then

We can write “if  $P$ , then  $Q$ ” for  $P \Rightarrow Q$ , but there are other ways to say this. E.g., we can write (1)  $Q$  if  $P$ , (2)  $P$  only if  $Q$ , or (3) when  $P$ , then  $Q$ .

## Noticing if-then

We can write “if  $P$ , then  $Q$ ” for  $P \Rightarrow Q$ , but there are other ways to say this. E.g., we can write (1)  $Q$  if  $P$ , (2)  $P$  only if  $Q$ , or (3) when  $P$ , then  $Q$ .

### Quick check 2

For each of these statements, define propositional variables representing each proposition inside the statement and write the proposition form of the statement.

- ▶ If you do not have enough sleep, you will feel dizzy during class.
- ▶ If you eat a lot and you do not have enough exercise, you will get fat.
- ▶ You can get A from this course, only if you work fairly hard.

# Only-if

Let  $P$  be “you get A from this course.”

Let  $Q$  be “you work fairly hard.”

Let  $R$  be “You can get A from this course, only if you work fairly hard.”

Let's think about the truth values of  $R$ .

Only if you work fairly hard.

$P$	$Q$	$R$
$T$	$T$	
$T$	$F$	
$F$	$T$	
$F$	$F$	

# Only-if

Let  $P$  be “you get A from this course.”

Let  $Q$  be “you work fairly hard.”

Let  $R$  be “You can get A from this course, only if you work fairly hard.”

Let's think about the truth values of  $R$ .

Only if you work fairly hard.

$P$	$Q$	$R$
$T$	$T$	
$T$	$F$	
$F$	$T$	
$F$	$F$	

Thus,  $R$  should be logically equivalent to  $P \Rightarrow Q$ . (We write  $R \equiv P \Rightarrow Q$  in this case.)

## If and only if: ( $\Leftrightarrow$ )

Given  $P$  and  $Q$ , we denote by

$$P \Leftrightarrow Q$$

the statement “ $P$  if and only if  $Q$ .”

## If and only if: ( $\Leftrightarrow$ )

Given  $P$  and  $Q$ , we denote by

$$P \Leftrightarrow Q$$

the statement “ $P$  if and only if  $Q$ .” It is logically equivalent to

$$(P \Leftarrow Q) \wedge (P \Rightarrow Q),$$

i.e.,  $P \Leftrightarrow Q \equiv (P \Leftarrow Q) \wedge (P \Rightarrow Q)$ .

Let's fill in its truth table.

$P$	$Q$	$P \Rightarrow Q$	$P \Leftarrow Q$	$P \Leftrightarrow Q$
$T$	$T$			
$T$	$F$			
$F$	$T$			
$F$	$F$			

# An implication and its friends

When you have two propositions

- ▶  $P =$  “I own a cell phone”, and
- ▶  $Q =$  “I bring a cell phone to class”.

We have

- ▶ an implication  $P \Rightarrow Q \equiv$   
“If I own a cell phone, I’ll bring it to class”,
- ▶ its **converse**  $Q \Rightarrow P \equiv$   
“If I bring a cell phone to class, I own it”, and
- ▶ its **contrapositive**  $\neg Q \Rightarrow \neg P \equiv$   
“If I do not bring a cell phone to class, I do not own one”.

## Quick check 3

Let's consider the following truth table:

$P$	$Q$	$P \Rightarrow Q$	$Q \Rightarrow P$	$\neg Q \Rightarrow \neg P$
$T$	$T$			
$T$	$F$			
$F$	$T$			
$F$	$F$			

## Quick check 3

Let's consider the following truth table:

$P$	$Q$	$P \Rightarrow Q$	$Q \Rightarrow P$	$\neg Q \Rightarrow \neg P$
$T$	$T$			
$T$	$F$			
$F$	$T$			
$F$	$F$			

Do you notice any equivalence?

## Quick check 3

Let's consider the following truth table:

$P$	$Q$	$P \Rightarrow Q$	$Q \Rightarrow P$	$\neg Q \Rightarrow \neg P$
$T$	$T$			
$T$	$F$			
$F$	$T$			
$F$	$F$			

Do you notice any equivalence?

Right,  $P \Rightarrow Q \equiv \neg Q \Rightarrow \neg P$ .
