## Lecture 7a: Binomial Coefficients (1)

Jittat Fakcharoenphol

August 7, 2021

# The binomial coefficients<sup>1</sup>

There is a reason why the term  $\binom{n}{k}$  is called the binomial coefficients. In this lecture, we will discuss

- ▶ the Pascal's triangle,
- ▶ the binomial theorem

---

<sup>1</sup>This lecture mostly follows Chapter 3 of [LPV].

# The equation

Last time we proved that, for  $n, k > 0$ ,

$$\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}.$$

# The equation

Last time we proved that, for  $n, k > 0$ ,

$$\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}.$$

While we can prove this equation algebraically using definitions of binomial coefficients, proving the fact by describing the process of choosing  $k$ -subsets reveals interesting insights. This equation also hints us how to compute the value of  $\binom{n}{k}$  using values of  $\binom{n-1}{\cdot}$ 's.

# The equation

Last time we proved that, for  $n, k > 0$ ,

$$\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}.$$

While we can prove this equation algebraically using definitions of binomial coefficients, proving the fact by describing the process of choosing  $k$ -subsets reveals interesting insights. This equation also hints us how to compute the value of  $\binom{n}{k}$  using values of  $\binom{n-1}{\cdot}$ 's. So, let's try to do it.

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1						

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1						

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1						

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		
5	1						

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		
5	1	5	10	10	5	1	

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		
5	1	5	10	10	5	1	
6	1						

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		
5	1	5	10	10	5	1	
6	1	6	15	20	15	6	1

# The table

We shall use the fact that  $\binom{n}{0} = 1$  and  $\binom{n}{k} = \binom{n-1}{k-1} + \binom{n-1}{k}$  to fill in the following table.

$n$	0	1	2	3	4	5	6
0	1						
1	1	1					
2	1	2	1				
3	1	3	3	1			
4	1	4	6	4	1		
5	1	5	10	10	5	1	
6	1	6	15	20	15	6	1

You can note that the table is left-right symmetric. This is true because of the fact that  $\binom{n}{k} = \binom{n}{n-k}$ .

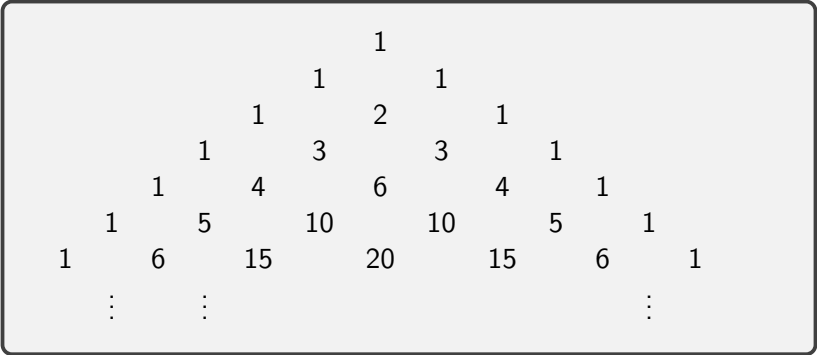

# The Triangle

If we move the numbers in the table slightly to the right, the table becomes the Pascal's triangle.

# The Triangle

If we move the numbers in the table slightly to the right, the table becomes the Pascal's triangle.

A diagram of Pascal's Triangle with 6 rows of numbers. The numbers are arranged in a triangular shape, with each row starting further to the left than the previous one. The numbers are: Row 0: 1; Row 1: 1, 1; Row 2: 1, 2, 1; Row 3: 1, 3, 3, 1; Row 4: 1, 4, 6, 4, 1; Row 5: 1, 5, 10, 10, 5, 1. Below the first two and last two numbers of the bottom row are vertical ellipses.

				1					
			1		1				
		1		2		1			
	1		3		3		1		
1		4		6		4		1	
	1	5		10		10		5	1
	⋮		⋮					⋮	

The table and the binomial coefficients have many other interesting properties.

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

▶  $(x + y)^1 = x + y$

▶  $(x + y)^2 =$

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

- ▶  $(x + y)^1 = x + y$

- ▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

▶  $(x + y)^1 = x + y$

▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$

▶  $(x + y)^3 =$

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

▶  $(x + y)^1 = x + y$

▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$

▶  $(x + y)^3 = x^3 + 3 \cdot x^2y + 3 \cdot xy^2 + y^3$

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

▶  $(x + y)^1 = x + y$

▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$

▶  $(x + y)^3 = x^3 + 3 \cdot x^2y + 3 \cdot xy^2 + y^3$

▶  $(x + y)^4 =$

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

- ▶  $(x + y)^1 = x + y$
- ▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$
- ▶  $(x + y)^3 = x^3 + 3 \cdot x^2y + 3 \cdot xy^2 + y^3$
- ▶  $(x + y)^4 = x^4 + 4 \cdot x^3y + 6 \cdot x^2y^2 + 4 \cdot xy^3 + y^4.$

Let's focus on the coefficient of each term. You may notice that terms  $x^n$  and  $y^n$  always have 1 as their coefficients. *Why is that?*

# Polynomial expansions

Let's start by looking at polynomial of the form  $(x + y)^n$ . Let's start with small values of  $n$ :

- ▶  $(x + y)^1 = x + y$
- ▶  $(x + y)^2 = x^2 + 2 \cdot xy + y^2$
- ▶  $(x + y)^3 = x^3 + 3 \cdot x^2y + 3 \cdot xy^2 + y^3$
- ▶  $(x + y)^4 = x^4 + 4 \cdot x^3y + 6 \cdot x^2y^2 + 4 \cdot xy^3 + y^4.$

Let's focus on the coefficient of each term. You may notice that terms  $x^n$  and  $y^n$  always have 1 as their coefficients. *Why is that?* Let's look further at the coefficients of terms  $x^{n-1}y$ . Do you see any pattern in their coefficients? *Can you explain why?*

## Another way to look at it

Let's take a look at  $(x + y)^4$  again. It is

$$(x + y)(x + y)(x + y)(x + y).$$

- How do we get  $x^4$  in the expansion?

## Another way to look at it

Let's take a look at  $(x + y)^4$  again. It is

$$(x + y)(x + y)(x + y)(x + y).$$

- ▶ How do we get  $x^4$  in the expansion? For every factor, you have to pick  $x$ .
- ▶ How do we get  $x^3y$  in the expansion?

## Another way to look at it

Let's take a look at  $(x + y)^4$  again. It is

$$(x + y)(x + y)(x + y)(x + y).$$

- ▶ How do we get  $x^4$  in the expansion? For every factor, you have to pick  $x$ .
- ▶ How do we get  $x^3y$  in the expansion? Out of the 4 factors, you have to pick  $y$  in one of the factor (or you have to pick  $x$  in 3 of the factors).

## Another way to look at it

Let's take a look at  $(x + y)^4$  again. It is

$$(x + y)(x + y)(x + y)(x + y).$$

- ▶ How do we get  $x^4$  in the expansion? For every factor, you have to pick  $x$ .
- ▶ How do we get  $x^3y$  in the expansion? Out of the 4 factors, you have to pick  $y$  in one of the factor (or you have to pick  $x$  in 3 of the factors). Thus there are  $\binom{4}{3} = \binom{4}{1}$  ways to do so.

# The binomial theorem

**Theorem:** If you expand  $(x + y)^n$ , the coefficient of the term  $x^k y^{n-k}$  is  $\binom{n}{k}$ .

That is,

$$(x + y)^n = \sum_{k=0}^n \binom{n}{k} x^k y^{n-k} =$$
$$\binom{n}{n} x^n + \binom{n}{n-1} x^{n-1} y^1 + \binom{n}{n-2} x^{n-2} y^2 + \cdots + \binom{n}{1} x y^{n-1} + \binom{n}{0} y^n.$$

## Additional applications of the binomial theorem

The binomial theorem can be used to prove various identities regarding the binomial coefficients. For example, if we let  $x = 1$  and  $y = 1$ , we get that

$$(1 + 1)^n = 2^n = \binom{n}{0} + \binom{n}{1} + \cdots + \binom{n}{n-1} + \binom{n}{n}.$$

## Additional applications of the binomial theorem

The binomial theorem can be used to prove various identities regarding the binomial coefficients. For example, if we let  $x = 1$  and  $y = 1$ , we get that

$$(1 + 1)^n = 2^n = \binom{n}{0} + \binom{n}{1} + \cdots + \binom{n}{n-1} + \binom{n}{n}.$$

**Quick check.** Can you prove that

$$\binom{n}{0} - \binom{n}{1} + \binom{n}{2} - \binom{n}{3} + \cdots = 0.$$

*Note that this statements says that the number of odd subsets equals the number of even subsets.*
