September 12, 2023

Building up languages

Regular languages:

- Contenation
- ► Union
- ► Kleene star

Building up languages

Regular languages:

- Contenation
- ► Union
- ► Kleene star

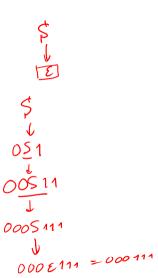

→ Context-free grammar:

- Contenation
- ► Union
- Recursion

Example

production rule substitution rule

$$\begin{array}{ccc}
\widehat{S} & \to & \underline{0}S\underline{1} \\
S & \to & \varepsilon
\end{array}$$

Example

$$\begin{array}{ccc} S & \to & 0S1 \\ S & \to & \varepsilon \end{array}$$

You can use "|" to write production rules more succinctly.

$$S \ \rightarrow \ \mathrm{O}S\mathbf{1} \mid \varepsilon$$

Definition

A **context-free grammer** consists of the following components:

- \triangleright a finite set Σ , a set of *symbols* (or *terminals*),
- ▶ a finite set Γ disjoint from Σ , a set of *non-terminals* (you can think of them as variables),
- ▶ a finite set R of production rules of the form $A \to w$ where $A \in \Gamma$ and $w \in (\Sigma \cup \Gamma)^*$ is a string of symbols and variable, and
- ▶ a starting non-terminal (usually the non-terminal of the first production rule).

Another example

$$S \rightarrow A \mid B$$

$$A \rightarrow 0A \mid 0C$$

$$B \rightarrow B1 \mid C1$$

$$C \rightarrow \varepsilon \mid 0C1$$

Here $\Sigma = \{\mathbf{0}, \mathbf{1}\}$ and $\Gamma = \{S, A, B, C\}$.

Applying the rules

If you have strings $x,y,z\in (\Sigma\cup\Gamma)^*$ and the production rule

$$A \to y$$
,

You can apply the rule to the string xAz. This yields the string

$$xyz$$
.

We use the notation

$$xAz \leadsto xyz$$

to describe this application.

Derivation

We say that z derives from x if we can obtain z from x by production rule applications, denoted by $x \leadsto^* z.$

Formally, for any string $x,z\in (\Sigma\cup\Gamma)^*$, we say that $x\leadsto^*z$ if either

- ightharpoonup x=z, or
- $\blacktriangleright x \leadsto y \text{ and } y \leadsto^* z \text{ for some string } y \in (\Sigma \cup \Gamma)^*.$

L(w)

The language L(w) of string $w \in (\Sigma \cup \Gamma)^*$ is the set of all strings in Σ^* that derive from w, i.e.,

$$L(w) = \{ x \in \Sigma^* \mid w \leadsto *x \}.$$

L(w)

The language L(w) of string $w \in (\Sigma \cup \Gamma)^*$ is the set of all strings in Σ^* that derive from w, i.e.,

$$L(w) = \{ x \in \Sigma^* \mid w \leadsto *x \}.$$

The language generated by a context-free grammar G, denoted by L(G) is the language of its starting non-terminal.

L(w)

The language L(w) of string $w \in (\Sigma \cup \Gamma)^*$ is the set of all strings in Σ^* that derive from w, i.e.,

$$L(w) = \{ x \in \Sigma^* \mid w \leadsto *x \}.$$

The language **generated by** a context-free grammar G, denoted by L(G) is the language of its starting non-terminal.

A language L is **context-free** if there exists some context-free grammar G such that L(G) = L.

Grammar G_1

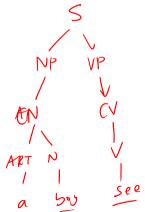

```
S \rightarrow NPVP
    NP \rightarrow CN|CN|PP
     VP \rightarrow CV|CV|PP
    PP \rightarrow PREP CN
    CN \rightarrow ART N
    CV \rightarrow V|V|NP
  ART \rightarrow \text{a}|\text{the}|
       N \rightarrow \text{boy}|\text{girl}|\text{flower}
       V \rightarrow \text{touches}|\text{likes}|\text{sees}|
PREP \rightarrow \text{with}
```

Small English grammar

```
S \rightarrow NPVP
    NP \rightarrow CN|CN|PP
    VP \rightarrow CV|CV|PP
    PP \rightarrow PREPCN
    CN \rightarrow ART N
    CV \rightarrow V|V|NP
  ART \rightarrow \overline{a} the
      N \rightarrow \text{boy|girl|flower}
      V \rightarrow 	ext{touches} | 	ext{likes} | 	ext{sees} |
PREP \rightarrow \text{with}
```

ightharpoonup Examples of strings in $L(G_2)$ are:

a boy sees

Small English grammar

```
S \rightarrow NPVP
   NP \rightarrow CN|CN|PP
   VP \rightarrow CV|CV|PP
    PP \rightarrow PREP CN
   CN \rightarrow ART N
   CV \rightarrow V|V|NP
  ART \rightarrow a | the
     N \rightarrow \text{boy|girl|flower}
      V \rightarrow {\sf touches|likes|sees}
PREP \rightarrow \text{with}
```

- ightharpoonup Examples of strings in $L(G_2)$ are:
 - a boy sees
 - ▶ the boy sees a flower

Small English grammar

```
S \rightarrow NPVP
   NP \rightarrow CN|CN|PP
    VP \rightarrow CV|CV|PP
    PP \rightarrow PREPCN
   CN \rightarrow ART N
    CV \rightarrow V|V|NP
  ART \rightarrow a | the
      N \rightarrow \text{boy|girl|flower}
      V \rightarrow \text{touches}|\text{likes}|\text{sees}|
PREP \rightarrow \text{with}
```

- **Examples** of strings in $L(G_2)$ are:
 - a boy sees
 - the boy sees a flower
 - a girl with a flower likes the boy

$$\begin{array}{ccc} S & \rightarrow & A \mid B \\ A & \rightarrow & 0A \mid 0C \\ B & \rightarrow & B1 \mid C1 \\ C & \rightarrow & \varepsilon \mid 0C1 \end{array}$$

> 00011

$$\begin{array}{ccc} S & \rightarrow & A \mid B \\ A & \rightarrow & 0A \mid 0C \\ B & \rightarrow & B1 \mid C1 \\ C & \rightarrow & \varepsilon \mid 0C1 \end{array}$$

- **>** 00011
- **O**1111

$$\begin{array}{ccc} S & \rightarrow & A \mid B \\ A & \rightarrow & 0A \mid 0C \\ B & \rightarrow & B1 \mid C1 \\ C & \rightarrow & \varepsilon \mid 0C1 \end{array}$$

- **>** 00011
- **01111**
- **111110**

$$S \rightarrow A \mid B$$

$$A \rightarrow 0A \mid 0C$$

$$B \rightarrow B1 \mid C1$$

$$C \rightarrow \varepsilon \mid 0C1$$

- **>** 00011
- **01111**
- **111110**

$$S \rightarrow A \mid B$$

$$A \rightarrow 0A \mid 0C$$

$$B \rightarrow B1 \mid C1$$

$$C \rightarrow \varepsilon \mid 0C1$$

a girl with a flower likes the boy

```
S \rightarrow NPVP
   NP \rightarrow CN|CN|PP
    VP \rightarrow CV|CV|PP
    PP \rightarrow PREPCN
   CN \rightarrow ART N
    CV \rightarrow V|V|NP
  ART \rightarrow a | the
     N \rightarrow \text{boy|girl|flower}
      V \rightarrow \text{touches}|\text{likes}|\text{sees}|
PREP \rightarrow \text{with}
```

Ambiguity

$$S \rightarrow 1 \mid S + S \mid S * S$$

Ambiguity

- ▶ 1 + 1 * 1
- ightharpoonup 1 + 1 + 1 + 1 + 1

$$S \rightarrow 1 \mid S + S \mid S * S$$

Ambiguity

$$ightharpoonup 1 + 1 + 1 + 1 + 1$$

$$S \rightarrow 1 \mid S + S \mid S * S$$

- lacktriangle A string w is **ambiguous** with respect to a grammar G if more than one parse tree for w exists.
- \triangleright A grammar G is **ambiguous** if some string is ambiguous with respect to G.
